Fable

AI Vishing Simulations

Would your help desk reset MFA for a cloned voice?

Fable places live, authorized AI voice calls to your help desk, shared lines, and high-exposure employees, coaches each person on the call, and shows you exactly where your process held and where it broke.

Q4 offer

15% off

Get 15% off Fable AI Vishing for your first 12 months when you sign by December 15, 2026.

Start testing your phone channel this quarter, before attackers do it for you.

Why now

442%

growth in vishing from the first to the second half of 2024[1]

$100M+

lost by MGM Resorts after one call to its help desk[2]

$25M

wired after one deepfake call impersonating a CFO[3]

How a Fable vishing test works

01

Pick a scenario

Use 50+ pre-built pretexts or your own, graded against your verification policy.

02

Fable makes the call

A live AI caller applies real pressure tactics, adapts to pushback, and can use a cloned voice.

03

Coach on the call

When the employee complies or refuses, the AI reveals the test and coaches them.

04

Review the evidence

Every call includes a transcript and a pass or fail result with the reason.

Vishing, built into Fable's closed loop

Detect

Find the phone-exposed people and teams attackers target, using signals from your security stack.

Evaluate

Call results feed each person's risk score alongside 100+ other behaviors.

Act

Coach on the call, then follow up with briefings and nudges in the workflow.

Prove

Show verification behavior improving over time with board-ready reporting.

Lock in your 15% discount before December 15.

Scan to book time with a Fable vishing expert and secure Q4 pricing for your first 12 months.
